J. H. ELLER & COMPANY,

CANTON, OHIO, U. S. A.

STAMPED METAL CEILINGS

Classified Designs—The Most Durable and Handsome Ceilings in Use.

WE wish to call the attention of Architects, Builders, Contractors and Business Men to the use of Sheet Steel as an inside finish for Ceilings, Wainscoting, Etc., and all interior decorations. This material, made up in appropriate designs, according to the style of architecture desired, is fast supplanting the old fashioned lath, plaster and wood ceilings. It possesses the very essential advantages of beauty, durability and fire-proof qualities, and also corresponds with the style of building in which it is to be used. We are producing some very handsome designs, which are comparatively inexpensive.

They are suitable for all kinds of buildings, such as storerooms, factories, offices, asylums, hospitals, churches, colleges, school houses, etc. They supply a much needed want in building material, in places where plastered ceilings are unsuitable on account of their cracking and falling off, and liability to become detached by motion of machinery, or any other cause that produces jarring or concussion upon the floor above. But, over and above these, are their intrinsic value as a fire-proof protection against the spread of fire in a building.

We fit these ceilings up for any sized room, when accurate drawings and measurements are sent us. The drawings must show all angles and offsets in the ceiling, also all chandeliers and drops.

To Architects, Contractors and Builders:

We take pleasure in presenting you with a copy of the Architects' and Builders' Edition of our Catalogue, in compiling which we have endeavored to show the desirable features and superiority of Stamped Metal work over the old style plaster and wood finish; the former being not only inartistic, but absolutely dangerous, especially in public buildings of all kinds and business blocks, while the latter cannot be made attractive at any moderate cost, and besides affords no protection against the spread of fire.

We have been able to show only a very limited number of designs into which these goods can be formed. We are constantly increasing our line, and it should be borne in mind **that we can supply anything in this line of work,** and will be pleased to submit estimates at any time on any special designs. Almost all of the combinations shown can be changed to suit the wishes of our customers by substituting other fillers, mouldings, etc., with very little, and in many cases no additional cost, and many new combinations can be formed by the proper arranging of the different sets of panels, etc.

We trust this book will merit a place in your files, and that we can interest you in these goods to our mutual advantage. **We offer special inducements** to those in position to specify our goods.

Respectfully,

J. H. ELLER & COMPANY.

TERMS

NET CASH in 30 days, or 2 per cent. off if paid in 10 days from date of invoice. Positively no discount allowed after 10 days, **whether goods are delivered or not.** Parties not rated by Commercial Agencies must furnish security or satisfactory references, which should be sent with order, and sufficient time must be allowed to obtain reports from them. Where this is not done Bill of Lading will be sent attached to Sight Draft through nearest bank. Bills not paid promptly when due are subject to sight draft without notice. In no case will accounts be permitted to run past maturity without settlement, either by cash or note with interest. We guarantee prompt attention to all orders, all of which are accepted subject to delays from strikes, accidents or other causes beyond our control. **We do not insure deliveries within any specified time,** as we cannot control the action of railroad companies. We always use every effort to prevent delays in transit, and **our responsibility ceases when transportation company receipts for the shipment in good order.** All claims for shortage must be made immediately on receipt of goods and before work of erecting has commenced, otherwise they will not be considered or made good. **On receipt of goods, open all packages and compare every item with packing slip which we send with invoice, so as to be sure the number of pieces and everything is complete and corresponds with the quantity called for.**

We will positively not be responsible for any loss, delay or damage to goods after they leave our shops, and no deductions will be allowed for same. It is often almost impossible to send the **exact** quantity of ceiling material required, so that customers frequently receive more than is needed for their work; such **surplus is our property, as no charge has been made for it,** and must be returned by freight **at once, and no credit will be allowed for same.** When returning goods, mark packages plainly with our name and address, also your name, so that our receiving clerk will know from whom they come; send original B. L. to us soon as shipment is made.

When goods are sent according to instructions, after being delivered to the transportation company here, they are the property of the party ordering, and party must look to the Railroad Company for any loss or damage of whatever nature.

After work has commenced on an order it cannot be cancelled without first obtaining our consent. After being received, the goods cannot be returned except by special agreement direct from our office, and where goods are thus taken back it can only be done by allowing us sufficient amount from invoice price to cover cost of freight, drayage and handling, as well as repainting and remaking when necessary, in addition to damage in transit.

All prices are made for prompt acceptance only, and are subject to change without notice, and orders given to salesmen are subject to our approval.

Very truly yours,

J. H. ELLER & COMPANY.

HOW TO ORDER.

In ordering ceilings, it is necessary that a diagram with exact measurements of the surface to be covered, showing all angles, offsets, stairways, skylights, elevator or other openings, be sent to us, so that the working plan can be made properly, and thus avoid any trouble in erecting. When centers are to be used, the location of the lights should also be shown, although it is sometimes necessary to change same slightly in order to properly arrange the ceiling and avoid cutting any of the panels.

Give distance down on side walls that the cove or cornice and foot mould is to extend, and for store rooms, state whether cove can be used around entrance and over show windows, and if not, give distance between top of windows and ceiling line, so that a proper finish may be sent; also show where cove should stop in front or along the sides, and if there are stairway or skylight openings, we must know whether cove can be used around them or not.

Always give extreme measurements of rooms and be sure that the total measurements of offsets and between angles, etc., correspond with the extreme dimensions given. Height of ceiling should also be given, and if walls are not parallel or square with each other, the angles must be shown.

To enable us to do good work and give satisfactory results, we must have full and accurate measurements and any other information affecting the space to be covered, **as all the knowledge we have concerning your room is what you give us.**

Our ceilings match perfectly and are easily applied, because when accurate information is sent us, we make a construction drawing which we send you, which shows in detail the location of every member of which the ceiling is composed, and with same we furnish a full and explicit direction sheet, telling how to do the work, so that **any mechanic** can put them up without trouble, if our plans and directions are adhered to.

It is sometimes necessary to slightly change catalogue designs by adding or omitting a member, in order to make them work out properly and avoid unnecessary cutting and waste.

In making selection of designs, size of cove should be noted, so as to be sure that it can be used, and if it cannot, a substitute should be selected; if that is not done, we always send what we think is appropriate for the room.

We furnish ceiling nails and wood brackets for cove and mouldings for complete designs. Wood furring strips are always required for deep panel designs, but are not necessary for flat or continuous designs, when room has first been sheathed over with boards. As they can often be purchased locally at better prices than we can furnish them, owing to the freight which would have to be paid if shipped from here, we never include them in our price except where stated.

In ordering Side Wall Finish, the same care should be taken to send full and complete measurements and information, as for ceilings. The illustrations in catalogue show complete wall finish, including cove and base board; prices on side walls, however, when not otherwise stated, only include material from bottom of foot mould or cove to top of base board, which should be of wood or other material, and is not furnished by us, but a special formed covering for over wood base can be supplied at moderate cost when so desired.

Center Pieces are not included in price, except where stated.

All ceiling material is given one coat of light colored paint on both sides before leaving our factory.

It is not necessary to remove old plaster, as metal can be applied over it, it being only necessary to use longer nails in putting on furring strips than would otherwise be used.

GALVANIZED CORNICES

WE submit the following designs to give some idea of the character of work turned out by us in this line. Any of the designs shown are subject to modification, and can be either enlarged or reduced to suit the requirements of the customer at a small expense.

We will quote prices on any special design, if accurate drawings and specifications are sent us.

Our facilities in this branch of our business have been greatly increased, and we can insure our customers good workmanship and promptness in filling orders.

Each Cornice must be made up after measurements are received, which requires time, and it is important that orders be placed early, so that they may be delivered by the time the goods are needed.

In ordering Cornice *always* give extreme length including End Trusses. We will positively not be responsible for any errors made in measuring, nor will *any change* be made after work is started, except at the expense of *parties* ordering.

Trusses are all made with 12 inch face unless otherwise ordered.

Cornices are all special and the importance of having correct measurements before the work is started is plain to everyone.

All list prices are based on No. 26 gauge galvanized steel.

WE QUOTE ON COPPER CORNICE WHEN SPECIFICATIONS ARE SENT US.

VENTILATORS AND CHIMNEY CAPS

MADE OF GALVANIZED IRON.

In calling the attention of the public to the ECLIPSE VENTILATOR, our idea is to illustrate not only the Ventilator itself, but its practical working and design. It has a stationary cap, which is acted upon by the natural currents of the air, which, with the internal and external construction of the Ventilator, produces a vacuum, which simultaneously induces an upward draught, carrying with it all gaseous substances, smoke, etc., contained in the chimney, pipe, building, etc., to which the Ventilator is attached.

The "Eclipse" Ventilator is storm-proof, and has the greatest capacity of any Ventilator made.

To obtain the best results, it is necessary that the Ventilator have as large a capacity as the flue or opening upon which it is placed; for instance, for a flue 10 x 14 inches, inside, nothing less than a 12-inch Ventilator should be used.

It is a well-known fact that the question of ventilation for School Houses and Church Buildings, as well as all other classes of buildings, has already become a very important one among architects and builders. The "Eclipse" Ventilator or Chimney Top is the most popular and desirable of any in use, owing to its superior construction, effectiveness and ornamental appearance.

GALVANIZED IRON AND COPPER SKYLIGHTS

J. H. ELLER & CO.
CANTON, OHIO, U. S A.

Made complete with ¼-inch ribbed glass, which we pack and ship in separate cases.

These Skylights are so constructed as to insure them not to drip, either from condensation or rain, even without the use of putty, but to make them doubly secure we recommend that all glass be puttied. We do not furnish the wood curbs.

ORDER BY NUMBER ONLY.

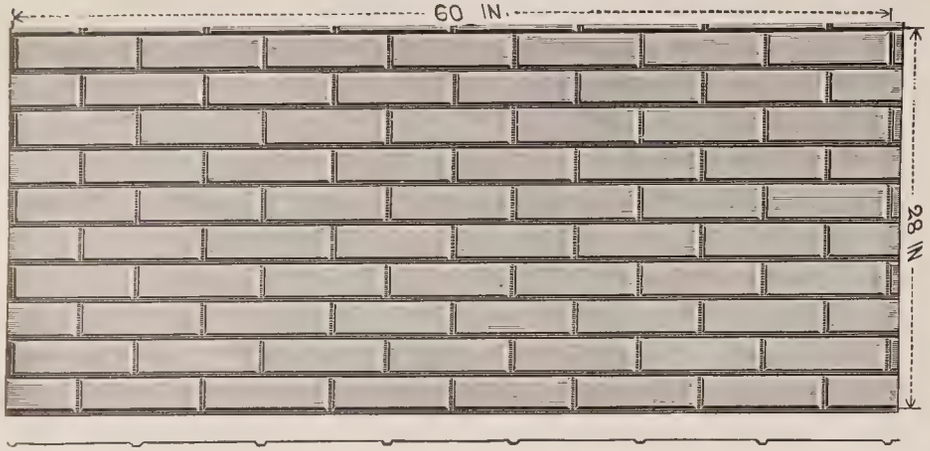
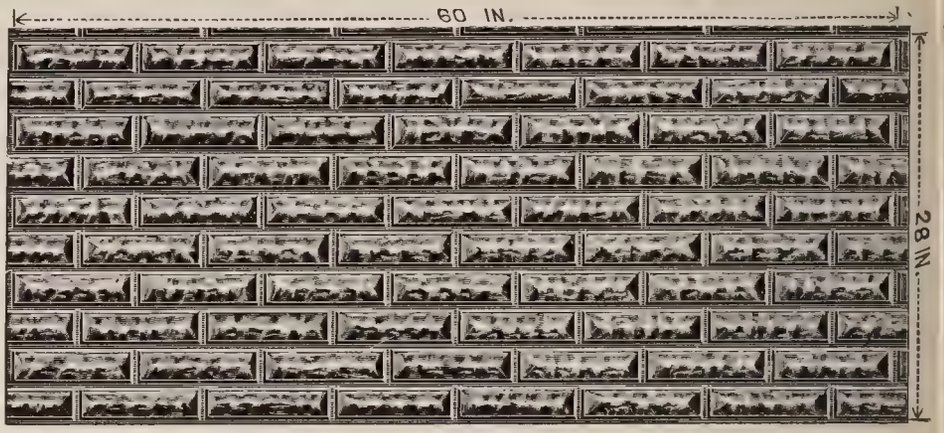
Prices on Application.

PRESSED STEEL AND ROCK-FACE BRICK SIDING

J. H. ELLER & CO.
CANTON, OHIO, U. S. A.



No. 351



No. 353

No. 352

Shows Pressed Steel Brick Siding Ready for Application.

MADE OF SHEET STEEL, PAINTED OR GALVANIZED.

It can be applied by any mechanic, lays perfectly smooth, and after painting cannot be distinguished from Pressed Brick.

The cost of this siding is not any more than the cost of best wood siding, and less than one-fourth the cost of brick. In beauty of appearance, durability, cheapness, and as a protection against fire, it has no equal.

It is made of the best soft steel, and shipped in lengths of 60 x 28 inches, containing 11 2/3 square feet to the sheet. A square consists of 9 sheets 60 x 28, painted on both sides, and will weigh, when packed for shipping, about 75 to 78 pounds per square.

☞ In ordering Brick Siding, allow 4 to 6 square feet to the 100 for laps.

No. 352 shows plain brick corner finish, 4 inches to the weather on each face.

No. 354 shows rock-faced brick corner finish, 4 inches to weather on each face.

No. 354

Shows Rock-Faced Steel Brick Siding Ready for Application.

MADE OF SHEET STEEL, PAINTED OR GALVANIZED.

This we furnish, made of painted Steel or Galvanized Iron, as desired. A square consists of 8 4/7 sheets, 60 inches long by 28 inches wide.

Directions for Putting On Steel Brick Siding Over Wood Sheathing.

1st. Get the level of your building entirely around its base or top and strike a line corresponding thereto.

2nd. Place a full sheet of siding at one corner of the building, allowing the end to extend two or more feet past the corner so that the cross grooves are immediately over the corner, the lower edge of the sheet resting on the chalk line.

3rd. Nail the sheet fast to the wall, through the grooves, sufficiently to hold it fast and bring it down solid all the way along. Begin at the middle of the sheet to nail and work towards ends and sides, putting nails two or three bricks apart. Never nail through the brick.

4th. Bend the projecting two feet around the corner with the hands or with a piece of board, using a mallet slightly to bring down any uneven places.

5th. Lay around the building until you meet the commencement. Place the first sheet of the second tier over the first, so as to break joints perfectly as in brick work, letting the half groove at the bottom of the sheet lap over the first and fit closely in the half groove at the top of the first sheet.

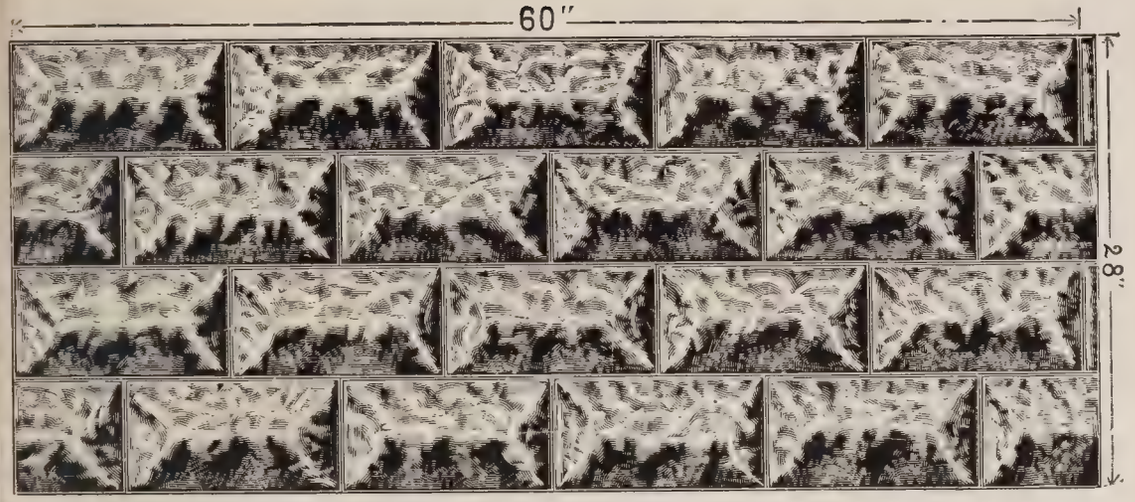
6th. Window and door frames should not be put in until after the siding is on. But in case the frames are in, the Steel Siding may be applied and faced at doors and windows the same as for wood siding.

7th. At windows or doors cut the sheets about three inches above the bottom sill, and the same distance from the side; then cut from the corner thus formed obliquely to the corner of the window or door space, bend the steel with the hands down upon the window sill and around the side of the studding and nail it fast. The window frames fit in over these laps and show a complete brick finish. Use a 7/8 inch wire barbed nail and drive through the grooves without the use of a punch, but always use a nail-set to drive nail home. Cost of nails for applying siding 5 cents per square, and will be shipped with siding when so specified in the order.

MADE OF BOTH PAINTED AND GALVANIZED STEEL

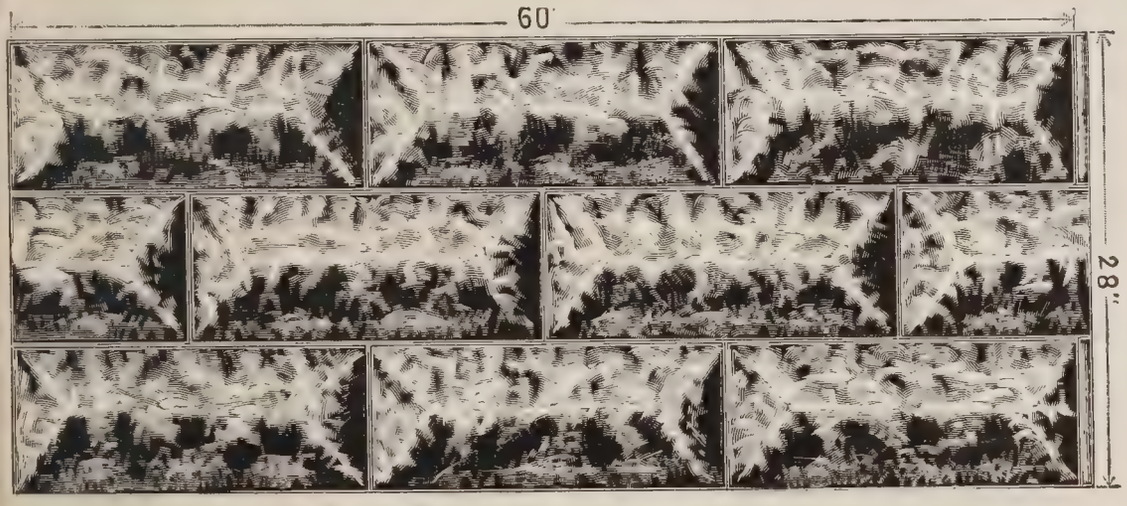
Prices on Application.

ROCK-FACE STONE



No. 355

Represents our Rock-Faced Stone, which we make of either Painted or Galvanized Steel.
A Square consists of 8 4/7 sheets 60 inches long by 28 inches wide.



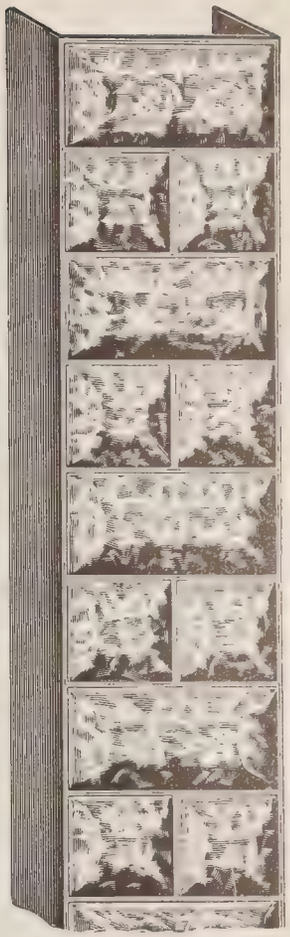
No. 356

Represents Rock-Faced Stone as above, only of larger size stone.
In ordering, allow four to six square feet to the hundred for laps.

No. 357

No. 358

Figures Nos. 357 and 358 show Rock-Faced Stone Corners, formed ready to complete the corners, with flange extending out to receive the siding. Before putting up metal corners place 7/8 inch thick wood corner the same width of the metal corner, back of the metal. After metal corners are up proceed to apply the siding, allowing the panels to match and fit up closely to the panels of the Rock-Faced Corner.



No. 359

Pilaster

All complete with 4-inch return.

MADE OF GALVANIZED STEEL ONLY

MADE OF BOTH PAINTED AND GALVANIZED STEEL.
